

Q3 Regional Review

Northern region held steady through the quarter despite the supply delays that hit every distribution hub in the first six weeks, and the team still closed within two points of the original commit for the period. Fulfilment recovered once the second carrier came online and the backlog cleared.

Southern accounts grew on the back of two large renewals, though margin slipped as discounting crept into the final stage of each deal and set an expectation the field will have to unwind before the next cycle begins. Two deals were pulled forward, which flatters this result.

Eastern pipeline looks thin for the coming quarter and needs attention now rather than in the review that nobody schedules until the numbers have already slipped and the recovery has become a great deal more expensive. Coverage is concentrated in three names.

Northern	1,240	on track
Southern	980	at risk
Eastern	610	on track
Western	1,455	at risk

Market Segments

Enterprise demand stayed resilient even as mid-market softened, and the two segments now pull in opposite directions on price. The result is a blended number that hides more than it shows and needs to be read one tier at a time.

Public sector remains lumpy and entirely deal-driven; a single procurement cycle moved the whole segment this quarter, which is not a trend and should not be planned against as though it were a dependable run rate.

Segment health

Behind Watch On plan

Financial Summary

Revenue and margin by region, with the prior-quarter comparison below.

Region	Revenue	Margin	vs Q2
North	1,240	31%	+4
South	980	22%	-3
East	610	18%	-6
West	1,455	27%	+1

Cash	4.2M	stable
Runway	19 mo	on track
Burn	220K/mo	at risk

1. Figures unaudited. 2. Margin excludes one-time items. 3. R&D spend < 5% of revenue.

Regional Detail

Northern detail confirms the headline: distribution recovered and the region carried the quarter, but the dependence on two carriers is a risk nobody has priced and the contingency plan is still a paragraph rather than a process.

Southern detail is the discounting story in miniature, deal by deal, and the pattern is consistent enough that it now looks like policy rather than a set of one-off exceptions the team keeps describing it as.

Eastern detail is thin by design because the pipeline is thin in fact; there is no amount of formatting that turns three opportunities into a forecast, and pretending otherwise is how the last two quarters went wrong.

Action required

Name a second carrier for the North by the end of the month or accept the risk.
